# The Evolution of DCIM

# What is DCIM

DCIM is software for Data Center Infrastructure Management.

“Data center infrastructure management (DCIM) tools **monitor, measure, track** and sometimes **control** data center resources and energy consumption of both **IT-related** equipment and **facilities’** infrastructure components.”

[IT Glossary](#)

# DCIM Trend

Automation, modeling and prevention

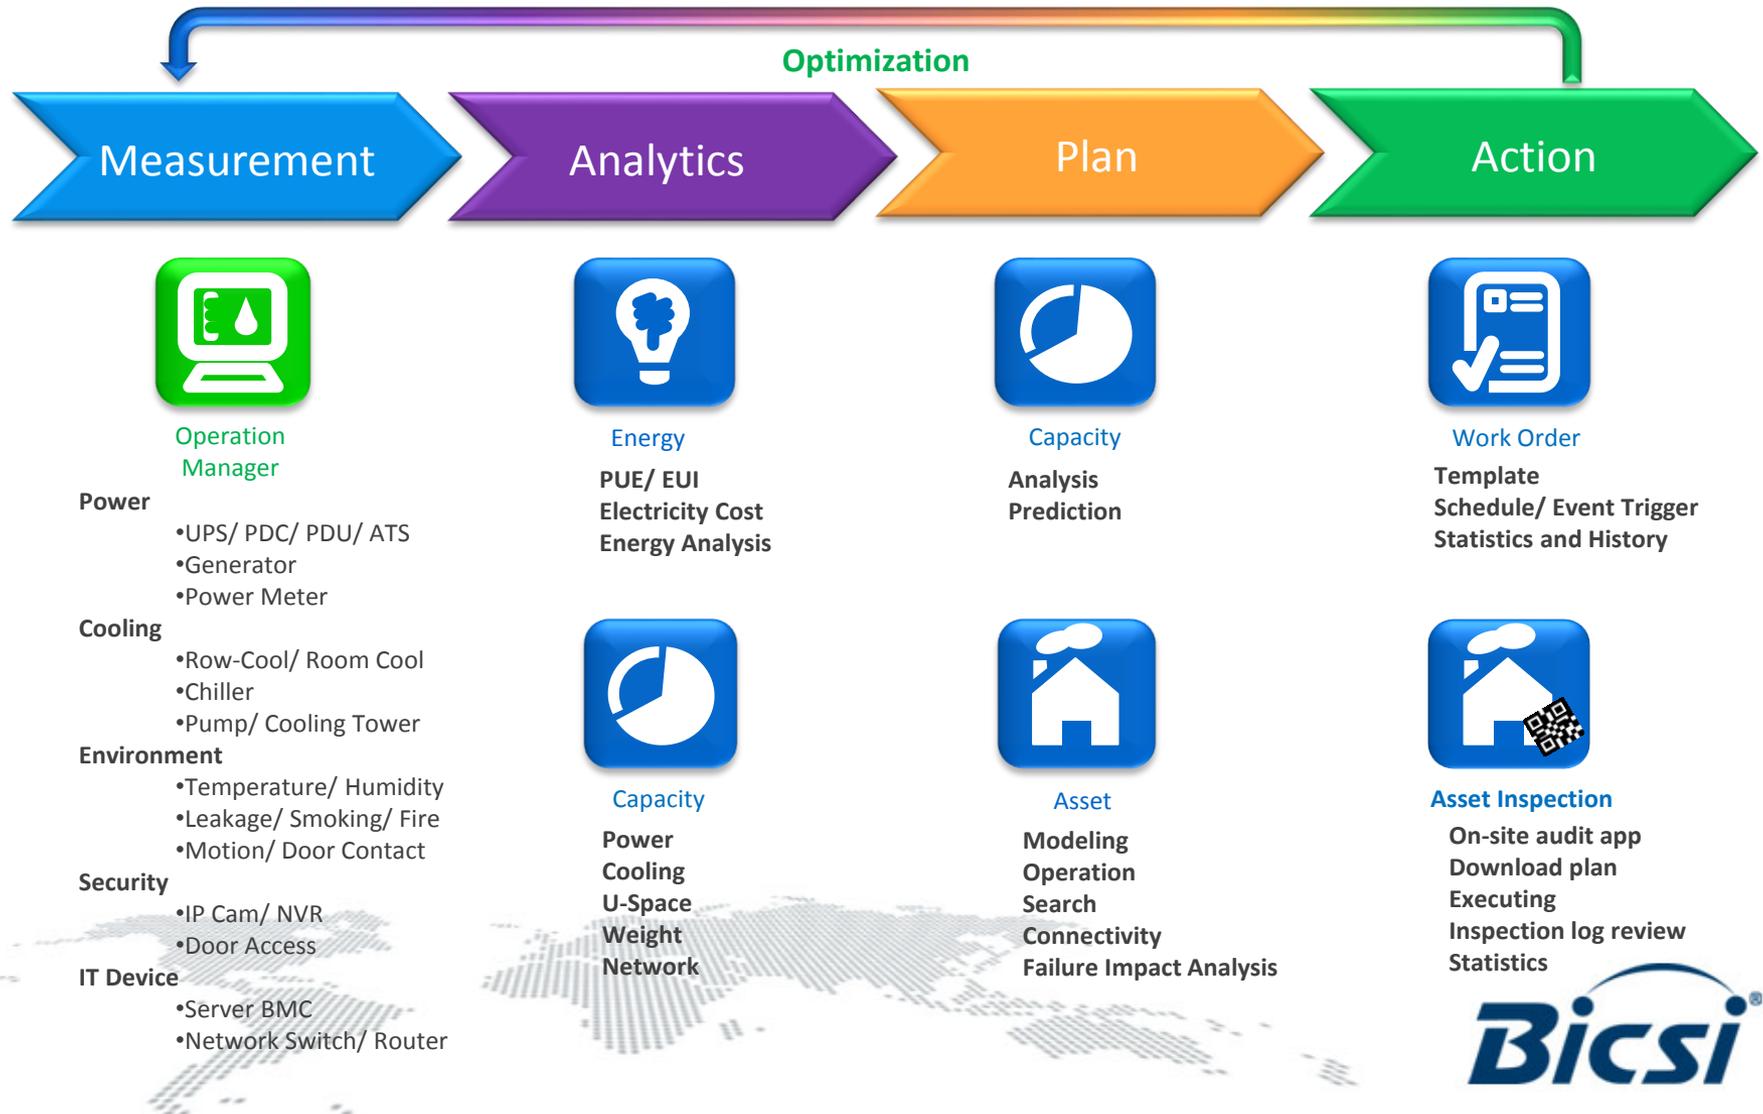

Manage the resources to optimize your datacenter

To integrate both of the infrastructure and IT devices

# Optimizing Datacenter Operation

# Users' Perspective

# Management teams in Datacenter

## IT Manager

- Where is my server physical located ?
- Is there any underutilized servers that I can consolidate ?
- Where do I place the next server?
- How will the new servers impact existing circuit and datacenter?
- Does the existing cooling and power have the capacity to accommodate new IT equipment ?

## Facility Manager

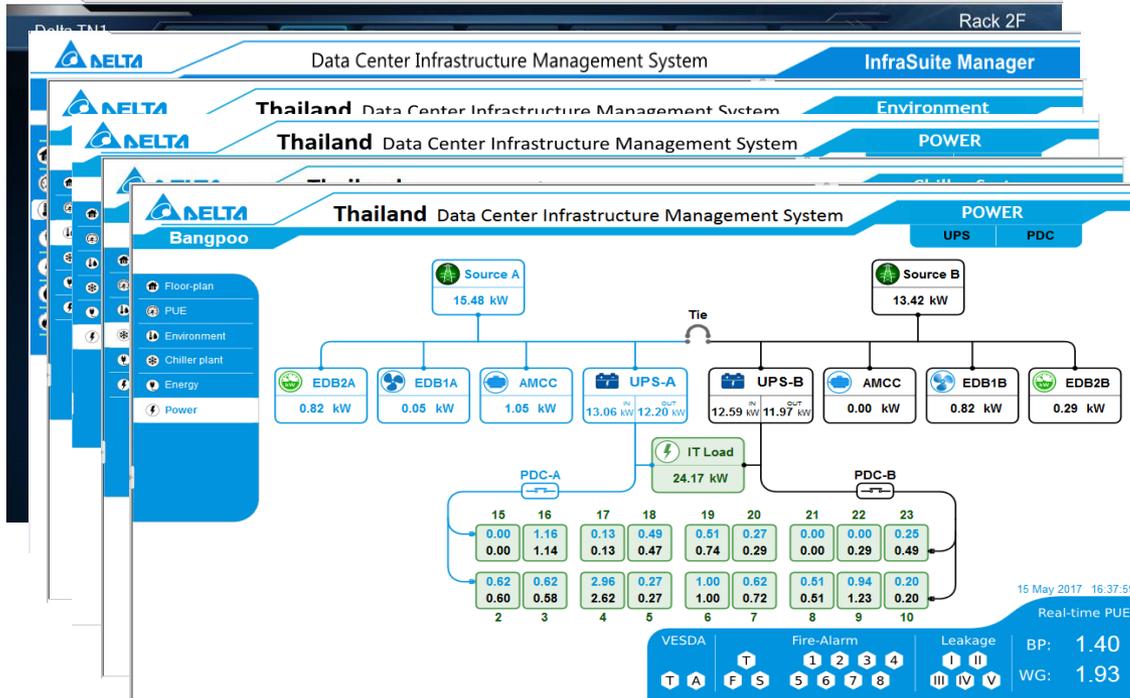

- Where and how can I address the hotspot in the datacenter?
- What's the PUE in the datacenter?
- What do I have in the datacenter and where are they located?
- The CRAC is having an alarm, What is the problem? What do I do now?
- How can I automate the process when there is a fire in datacenter?
- 1 of the rack has exceeded the power capacity. What should I do?

## C-Level Management

- What's the operation cost of the datacenter?
- How do I reduce the datacenter operational cost?
- When will the datacenter running out of power and cooling capacity?
- How efficient is the datacenter?
- When will I need to build another datacenter?

# Empower every member of your datacenter team

## Facilities Management

- Overall Layout of your datacenter
- Overall Environment mapping or profile of your datacenter
- All Equipment Status
- Chiller Plant Status and profile
- Power Diagram
- Alarm notification, reporting

# Empower every member of your datacenter team

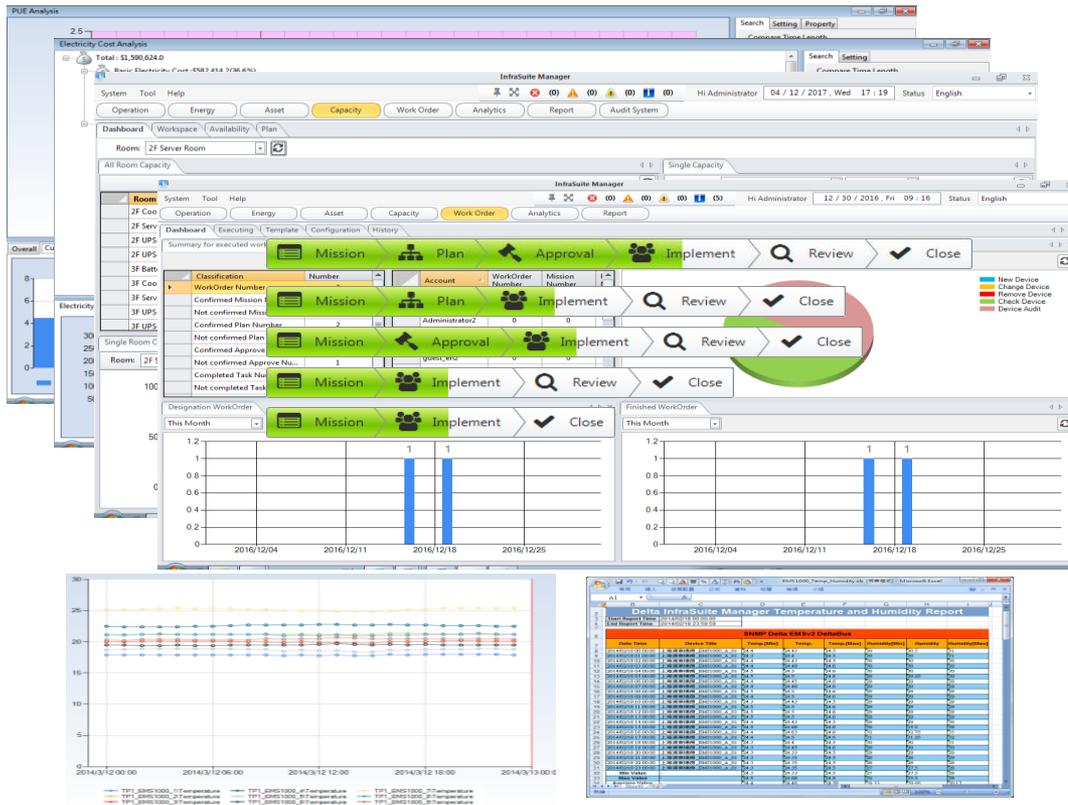

## IT Management

- Access control and surveillance
- Asset Management
- Capacity of Rack, DC level for U space, weight, Power and Network
- Multiple site management
- Alarm notification, reporting, schedule, etc.

# Empower every member of your datacenter team

## C-Level management

- Real time and historical PUE
- Electricity Cost and billing
- Overall Capacity utilization
- Work order progress and approval process
- Alarm notification, reporting

# Management Methodology by Delta DCIM

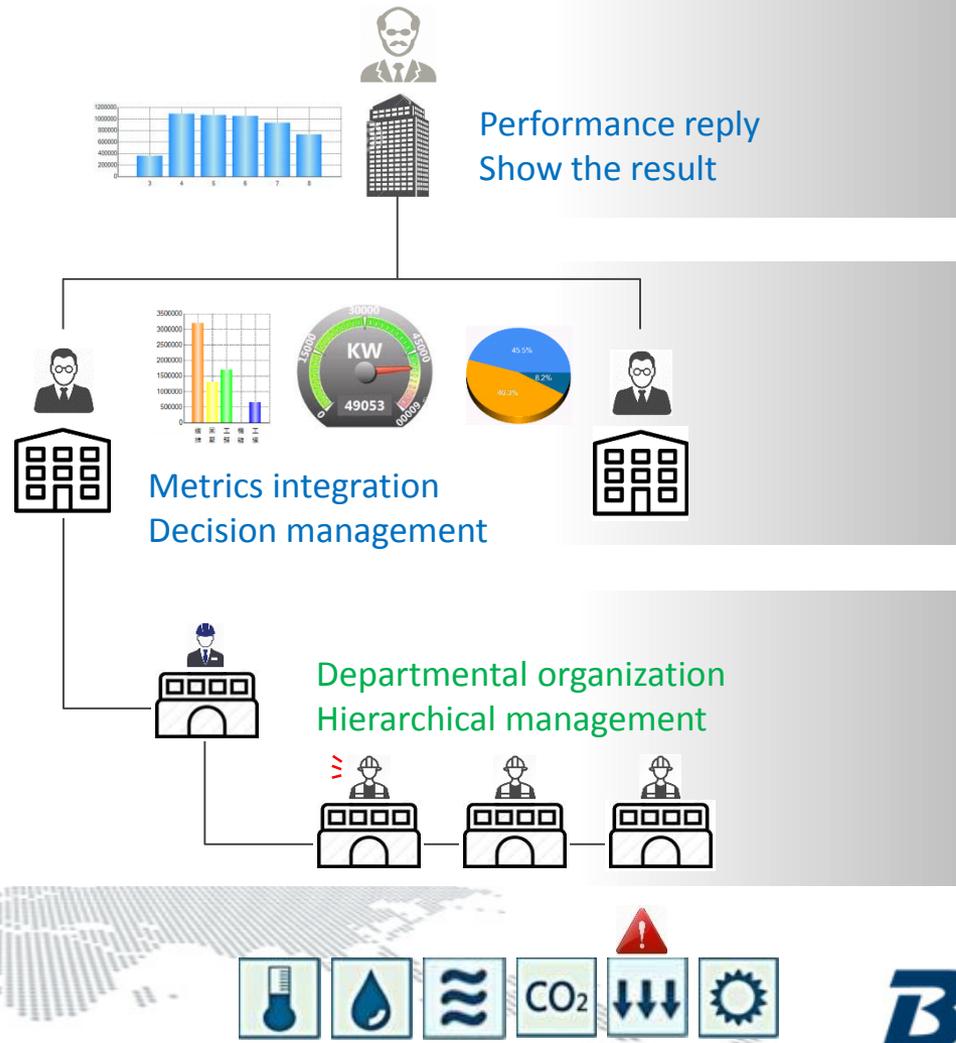

You cannot manage it without measurement

# Equipment Monitoring

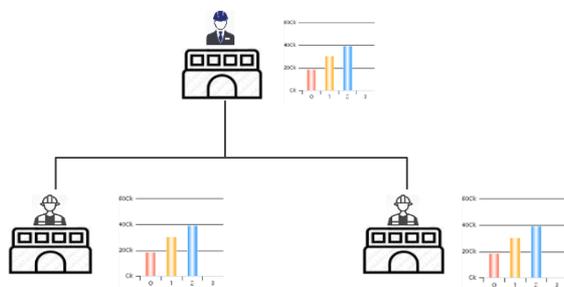

## Be Organizational for

- Equipment monitoring
- Role-based management
- Monitoring privilege
- Control privilege
- Notification

# Energy Management

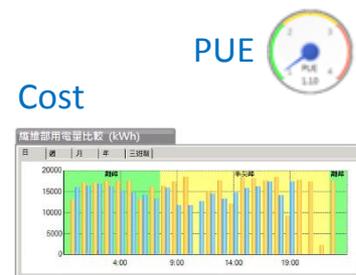

## Formula, Statistics

Formula

分 類		單 價 (每月 1 日至 9 月 30 日)	計算式 (費用以外貨幣)
基本 電費	用戶計次 (每戶每月)	單相 129.10 三相 262.50	
	經常契約(每瓦每月)	236.20	173.20
	週六半尖峰契約(每瓦每月)	—	173.20
	繼續契約(每瓦每月)	47.20	34.60
流動 電費 (每瓦)	週一 尖峰時間 07:30-22:30	3.98	3.90
	週五 離線時間 22:30-24:00 00:00-07:30	2.06	1.96
	週六 半尖峰時間 07:30-22:30	3.00	2.91
	離線時間 22:30-24:00 00:00-07:30	2.06	1.96
	週日及 離線日 離線時間 全日	2.06	1.96

Statistics

## Data Collection, Integration, Transfer, Store

### Energy Classification

Illumination

Gas

Water

# Advanced Energy Management

## Building PUE model

Use measurable (controllable) parameters to construct a model to predict PUE

1. Total server IT load [kW]
2. Total Campus Core Network Room (CCNR) IT load [kW]
3. Total number of process water pumps (PWP) running
4. Mean PWP variable frequency drive (VFD) speed [%]
5. Total number of condenser water pumps (CWP) running
6. Mean CWP variable frequency drive (VFD) speed [%]
7. Total number of cooling towers running
8. Mean cooling tower leaving water temperature (LWT) setpoint [F]
9. Total number of chillers running
10. Total number of drycoolers running
- ...

Given

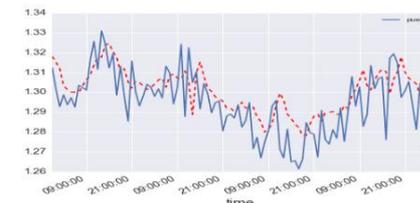

Setpoints:

Ventilation fan  
Chilled water temperature  
IT power consumption

...

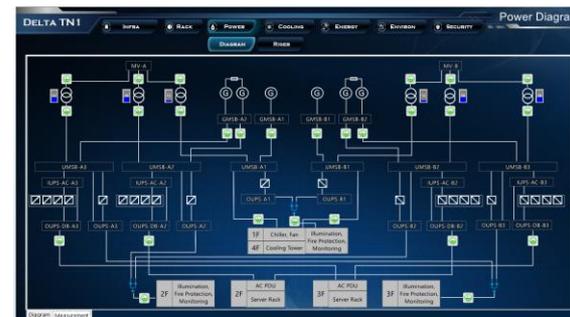

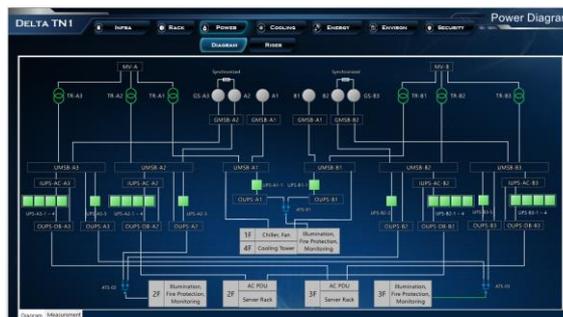

Predict PUE

# Power Management

## Single line diagram

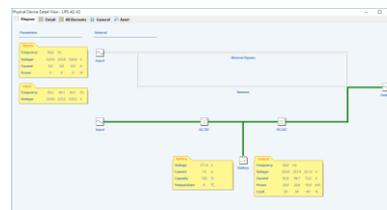

Show the SLD with power meter, breaker and component status

## Power Equipment Monitoring

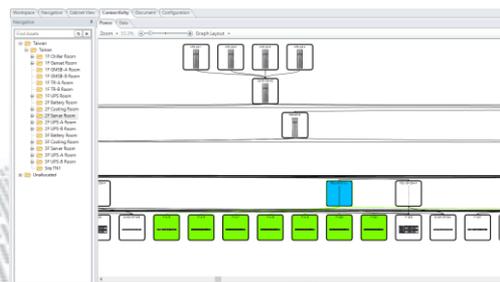

UPS, ATS, Genset, PDC, PDU, ...

The device can be identified quickly from the layout plans

## Power connectivity

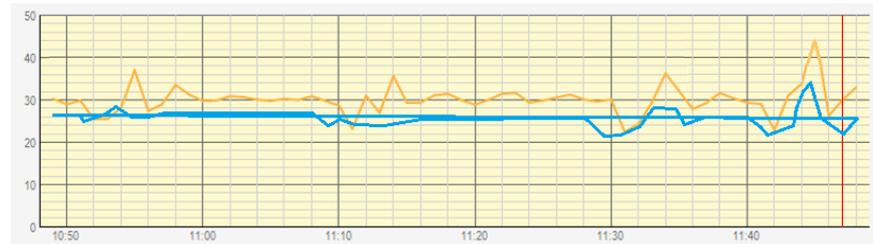

Failure impact analysis

# Cooling Management

## Cooling Loss Monitoring

IT power consumption v.s. Cooling capacity

## Identify the hot-spot

Rack load map

Thermal map

## Airflow & Cooling Performance

RCI (Rack Cooling Index)

RTI (Return Temperature Index)

Rating	RCI
Ideal	100%
Good	$\geq 96\%$
Acceptable	91 ~ 95%
Poor	$\leq 90\%$

Rating	RTI
Target	100%
Recirculation	$> 100\%$
Bypass	$< 100\%$

# Security Management

## Door Access Integration

Card reader, access controller integration

Door status detection

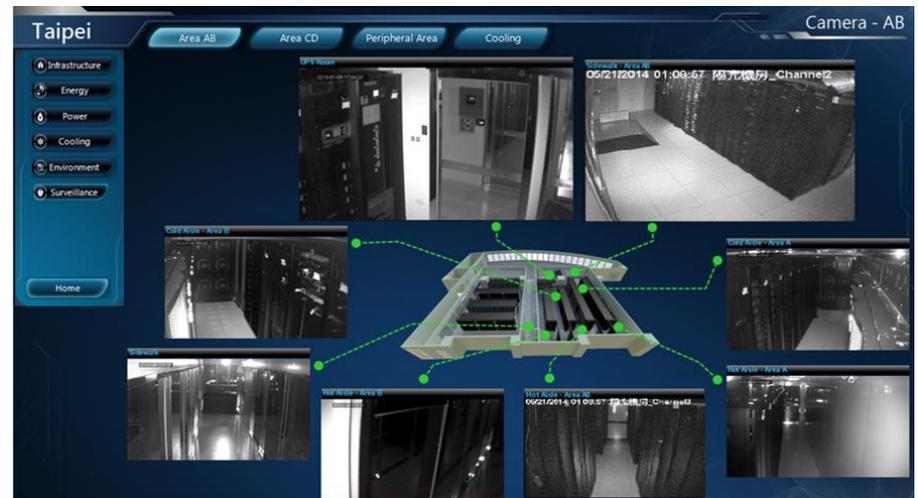

Event log for door and ID information

## Surveillance

Full time/ scheduling recording

Event trigger recording

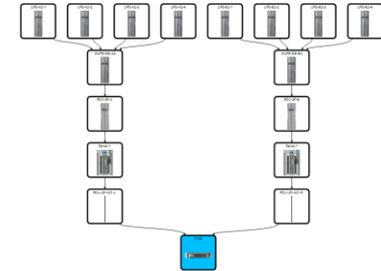

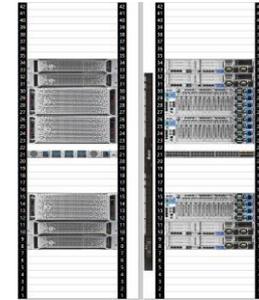

Playback based on time and event

# Rack Management

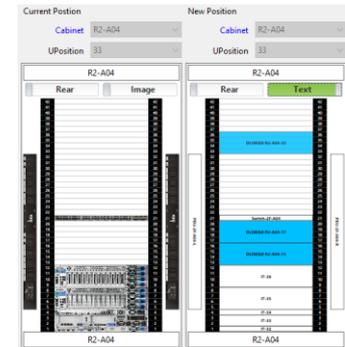

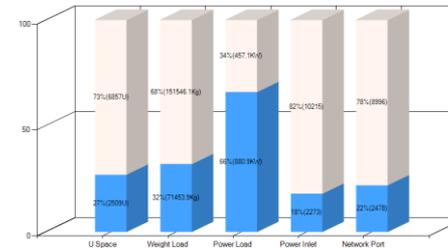

## Rack Asset

- Quickly search for server, network and power equipment
- Display detail rack content
- Power path backtracking
- Network connectivity

## Rack Capacity

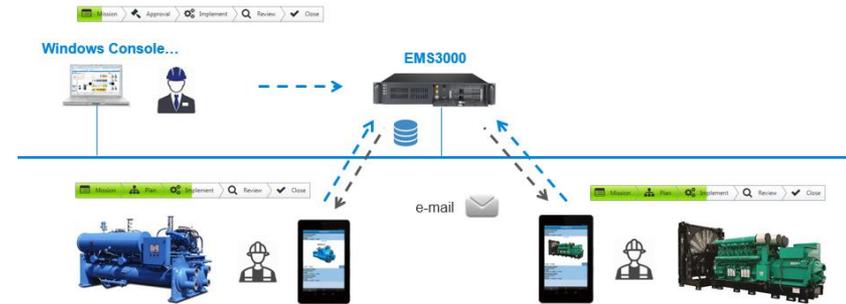

- Utilization of u-space, power, weight, network for room and rack
- Rule-based prediction for new asset plan
- Commit to workorder

# Process Management

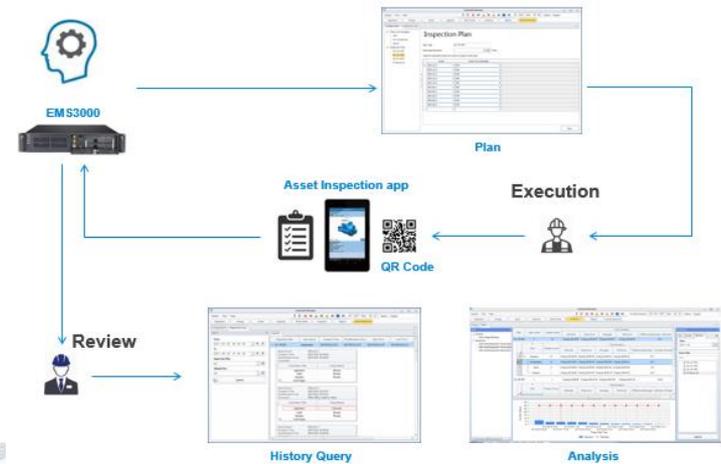

## Workorder

- Scheduling for maintenance plan, onsite inspection
- Event trigger for alarm elimination, prevention
- Problem report, record and execution platform

## Asset Inspection

- Reduce the asset inspection time
- Follow the planned instructions by using the app
